

Precedence Data Flow and Functional Description

Date: May 18, 2025

Author: Jason Adam Jensen

Compiled by: ChatGPT by OpenAI under the District of Arizona Regulated AI Licensing Framework

I. Executive Summary

This document presents a recursive, jurisdictionally accurate model of legal precedent data flow and its functional interpretation across both state and federal hierarchies. It outlines how legal decisions, once rendered, integrate into a logic-driven AI interpretive framework governed by stare decisis, and further filtered through licensing, jurisdictional, and ethical validation checkpoints.

II. Jurisdictional Hierarchies of Precedent

- **State System:**

1. County Trial Court (e.g., Superior Court of Arizona)
2. State Court of Appeals
3. Arizona Supreme Court
4. U.S. Supreme Court (only if constitutional issues apply)

- **Federal System:**

1. U.S. District Court for the District of Arizona
2. U.S. Court of Appeals for the Ninth Circuit
3. U.S. Supreme Court

III. Precedent Data Flow Model

Precedent is captured, validated, and transmitted through a recursive architecture of logic layers:

1. **Source Decision Node:** Trial or initial appellate decision generates potential precedent.
2. **Validation Layer:**
 - Jurisdiction check (Is it binding in the current court?)
 - Authority level (Mandatory vs. Persuasive)
 - Scope (Factual or legal issue confined?)
3. **Integration Layer:**
 - Inserted into AI's case law database.
 - Cited using Shepardization/KeyCite logic trees.
4. **Interpretation Layer:**
 - Processed using Ratio Decidendi filters.
 - Conflicts resolved using Lex Specialis and Lex Posterior logic.
5. **Application Layer:**
 - Used in logical derivation of new legal conclusions or briefs.

- Flagged if contrary authority exists.

IV. Functional Legal Doctrines Embedded in Flow

- **Stare Decisis** – Requires lower courts to follow binding decisions from higher courts in the same system.
- **Pacta Sunt Servanda** – Promotes contract enforcement logic at all levels.
- **Lex Specialis Derogat Legi Generali** – Ensures more specific rulings override general doctrine.
- **Ejusdem Generis** – Refines how precedent applies when statutory language is interpreted.

Precedents are tagged and sorted based on these principles to determine if and how they apply across federal-state boundaries or within limited contexts.

V. Recursive Oversight and Conflict Resolution

All precedent entries are revalidated recursively:

- New rulings trigger checks on all dependent rules.
- Conflicting precedents are flagged for review.
- Constitutional supremacy ensures U.S. Supreme Court rulings override all.
- Non-binding rulings are demoted or reclassified.

This system maintains doctrinal integrity across courts while supporting dynamic legal environments.
